

Enhancing Collaboration Through Advanced AV Solutions

FedEx Supply Chain

Modernizing AV for Enhanced Collaboration

 Warrendale, Pennsylvania

FedEx, a global logistics leader, faced collaboration challenges due to outdated AV systems. MediaNet AV upgraded eight key meeting spaces with enterprise-grade video conferencing technology, creating seamless communication between departments and locations. This modernization eliminated technical barriers, significantly improving team productivity and operational efficiency.

Seamless AV Integration and Impact

Empowering Users Across Roles

MediaNet AV equipped FedEx with reliable AV and Q-SYS systems, ensuring technical consistency across key collaboration spaces. The Q-SYS Core 110f processor formed the centralized platform connecting all endpoints, providing digital signal processing, audio routing, and unified control for the entire ecosystem.

Executive Boardroom: Triple-display configuration (85" primary with dual 65" flanking displays) with Q-SYS PTZ-IP auto-tracking cameras and Q-SYS ceiling microphone array enabling beamforming audio capture.

Large Conference Room: Dual-display setup (85" and 55") with 110° wide-angle camera and distributed ceiling speakers supporting divisible room configurations.

CEO's Office: Articulating 50" display with wide-angle camera and soundbar system, managed through the Q-SYS platform via 7" TSC Series touchscreen controller.

Small Conference Rooms: Standardized wide-angle cameras, tabletop microphones, and soundbar systems across all spaces for consistent operation.

Infrastructure Management: Centralized equipment rack housing the Q-SYS Core processor with redundant UPS protection, enabling remote monitoring, diagnostics, and system management through the Q-SYS Reflect Enterprise Manager platform.

Operational Advantages

The enterprise-grade AV infrastructure delivered substantial advantages to FedEx's operational capabilities:

- Elimination of technical barriers that previously hindered cross-departmental collaboration
- Standardization of the user experience across all meeting environments
- Reduction in IT support requirements through simplified system architecture
- Enhanced meeting efficiency through intuitive control interfaces

The intuitive design allows all users to operate the technology independently, letting them stay focused on objectives. From boardroom discussions to training and presentations, the systems deliver consistent performance, keeping everyone engaged in their work without technical distractions.

Since 2010, MediaNet AV has excelled in audio, video, and lighting solutions for churches, schools, and businesses. We design custom, intuitive systems and provide comprehensive training for seamless operation. Our innovative, client-focused approach ensures every project aligns with your goals.
